

Modified Formulation starting with Batch 344

Mara[®] Chrome MC has proven itself as a mirror silver effect for various applications. Due to a process change in manufacturing, the formulation had to be slightly adapted.

This results in a minimal change in viscosity, with the positive effect that thinning the ink is no longer necessary.

Extensive tests have shown very good edge sharpness and an improvement in the mirror effect. In this context, the drying parameters needed to be adjusted. These can be found in the Technical Data Sheet of Mara[®] Chrome MC.

For further information on Mara[®] Chrome MC please refer to www.marabu-inks.com

Date of Change-over

This change becomes effective starting with **batch 344 (immediately)**. The change can be identified by the additional label:

„Attention: Modified Formula“
